SideTool Fence Installer

- Efficiently places safety mesh, fencing wire, wire mesh, game fence, barbed wire, etc.
- **Roll out, install silt fence with pre-inserted wire mesh!**
- **Roll out, install silt fence with pre-inserted stakes (wood or metal)**
- Excavator bucket is free to remove rocks and other obstacles.
- **Place the attachment on your mini-excavator or skid-steer**
- No longer go backwards in a skid steer, drive forward!
- Placing the tool to the side works as a stabilizer in hillside conditions.
- Saves 40% over traditional labor-intensive systems

EFFICIENT – GO FORWARD!

SideTool has the most efficient fence installation system in the market. There is no need to install safety fencing going backwards on a skid steer. Drive forward and increase production by 40%.

IN FULL VIEW

Placing the SideTool Fence Installer to the side allows for the operator to see the working area far more effectively than ever before with full view of the working tool. With the tool placed below the swivel of an excavator, our SideTool Fence Installer allows for 360° visibilities and can be used in conditions where it was once prohibitive and dangerous.

MULTI-TOOL

By placing the SideTool Fence Installer below the swivel of an excavator the bucket is freed to allow the operator to simultaneously remove obstacles. Place it to the side of the skid steer with our skid steer coupler and drive forward!

All SideTool attachments and concepts are patented and/or pending. Engineered and manufactured in the USA.
